Configure Prompt Builder

Create reusable AI prompts that answer parcel questions using trusted Salesforce data.

What to do

1. Open Setup and search for Prompt Builder. Confirm that the feature is available and enabled in your org.

2. Create a prompt template suited to a parcel use case, such as explaining a parcel's latest status.

3. Write clear instructions: answer only from supplied Salesforce data, explain when information is unavailable and do not invent delivery dates or locations.

4. Add the appropriate record or related-record context using the options available in your org.

5. Preview and test the prompt with valid, missing and ambiguous parcel data.

6. Save and activate the template when the output is accurate and safe.

Expected result
The prompt returns clear, grounded responses and does not make up tracking information.
